Pawan Gupta & ARSET Team

Satellite Remote Sensing of Air Quality: Data, Tools, and Applications

Tuesday, May 23, 2017 – Friday, May 26, 2017
Indian Institute of Tropical Meteorology, Pune, India

Objectives

1. Gain a basic understanding of aerosol optical depth

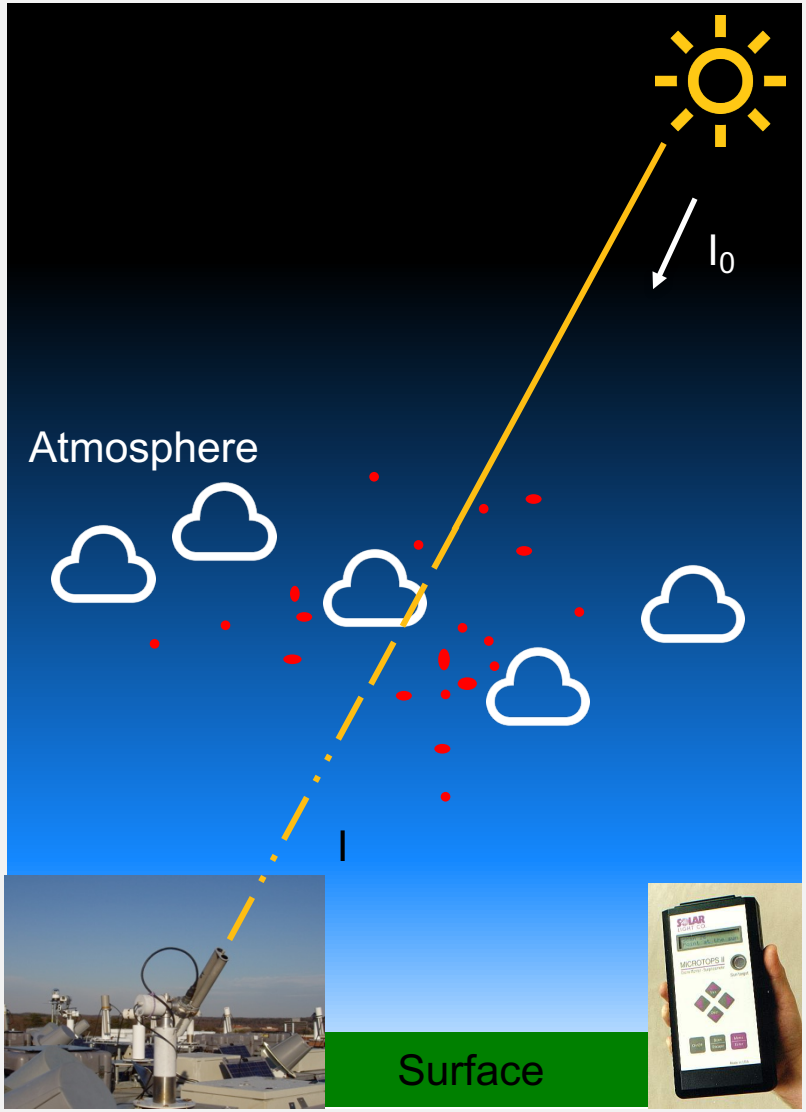
2. Gain knowledge of and ability to access available aerosol products from NASA sensors

Aerosol Optical Depth

- AOD: Aerosol **Optical** Depth
- AOT: Aerosol **Optical** Thickness

- These optical measurements of light extinction are used to represent aerosol amounts in the entire column of the atmosphere

Optical Depth



The optical depth expresses the quantity of light removed from a beam by **scattering** or **absorption** during its path through a **medium**.

optical depth τ as

$$I = I_0 e^{-m\tau}$$

$$m = \sec\theta_0$$

$$\tau = \tau_{Rayl} + \tau_{aer} + \tau_{gas}$$

A Few More Things About MODIS Data…

- MOD: Terra product
- MYD: Aqua product

- All MODIS products come in HDF format
- In HDF format each file contains both data and metadata

- **Scientific Data Set (SDS):** each parameter within a MODIS HDF file is referred to as an SDS
  - SDS must be referenced precisely according to name when analyzing the data within your own computer code

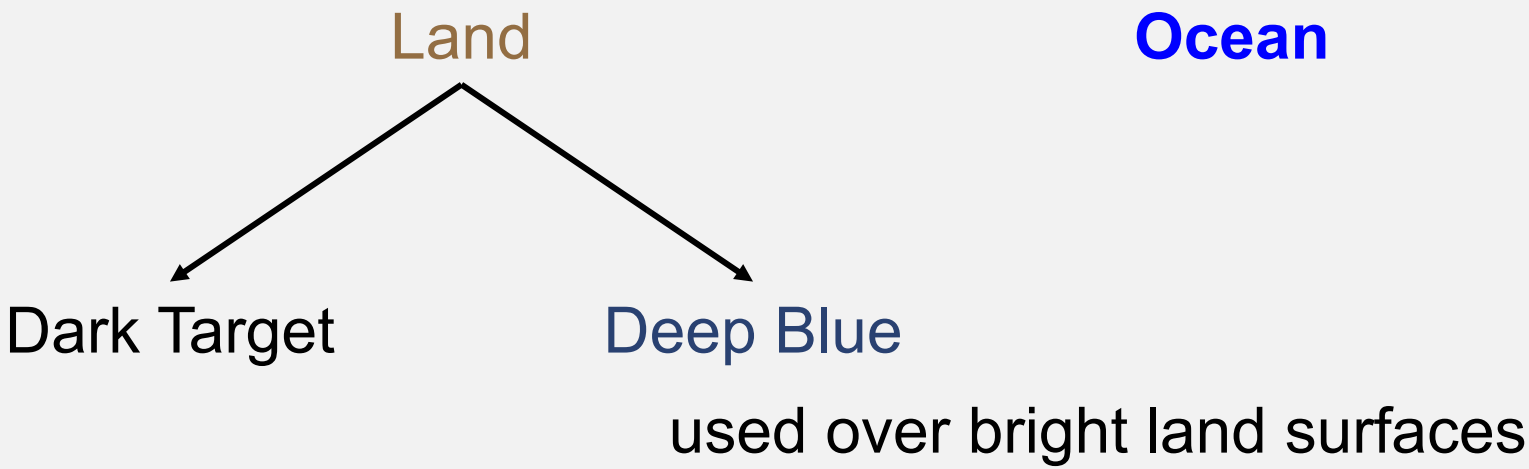
Things That Change with Each Instrument

(So you need to learn them!)

- Calibration Accuracy
- Quality Assurance – quality of the data
- Data Formats
- Product Resolutions
- Creating Level 3 products from Level 2 –temporally and spatially averaging
- Current data release and data history

MODIS Aerosol Products

Three Separate Algorithms



- The dark target and deep blue products are separate and when both are available, the user must select which to use
- In collection 6, there is a joint product that uses an automated procedure to select the appropriate product

Satellite Limitations

- **Optical measurements**
  - only available in day time
  - very limited in night time
- Only available under
  - cloud free conditions
  - Snow/Ice free conditions
- **Accuracy** - vary (AOD) – Depends on satellite/algorithm
  - Very good over dark vegetated surfaces
  - Moderate over urban surfaces
  - Moderate to low over bright surface
  - Complex topography (i.e. mountains) – can be problematic
  - More uncertain for complex mixture of aerosols
- **Chemical Composition** - Very limited capabilities, only at research level
- **Temporal Coverage**
  - Usually once a day
  - But can use multiple satellite to get 2-3 a day
  - Geostationary will provide more frequent observations
- **Spatial Resolution**
  - 10 km (good)
  - 3 km (moderate)
  - 1 km, 0.75 km etc.
